Answer each question in a few sentences.

Ethics Quiz

Bias, privacy laws and generative AI.

1. **A bank trains a model on its past loan decisions to decide who gets a loan. The model uses zip code as one input, and it approves fewer loans in some neighborhoods. Say where the bias came from, and give one way to reduce it.**

2. **Name the law that fits each case:**
   (a) A game app collects the birthdays of players aged 10.
   (b) A US company stores data about customers who live in Germany.
   (c) A university keeps students' grades and records.

3. **A team deletes the column "Gender" from its data and says the model is now fair. Is that correct? Explain why or why not.**

4. **A classmate pastes a list of real customers' names and emails into a public AI chatbot to summarize it, then copies a statistic from the answer into a report. Give two problems with what they did and say what they should do instead.**
